

Educational activities in the area of SEA. ABSTRACT

SECONDARY EDUCATION

"OUR COASTAL AREAS"

(Total duration is approximately 3 hours (half day))

The secondary school students perform a series of workshops related to the marine environment.

Port Mataró: During the visit to the port of killing the students work: the characteristics of a port identification of the different parts of a boat, fishing gear. This workshop complemented by boat activity.

Mediterranean Fish: Study the anatomy and external trade of the species typical of the Catalan coast.

The third workshop, you can choose one of two workshops:

Microscopic Life: observation of planktonic organisms, with the help of microscopes and magnifying glasses, while learning to identify them and see their importance in the sea.

Molluscs: Introductory workshop to the knowledge of mollusks. Allow students to encourage observation, start it in the process of classification and knowledge of the evolution of living beings.

OTHER ACTIVITIES FROM BOAT. INFANT, PRIMARY AND SECONDARY
